Request for Applications: Collaborative Computational Tools for the Human Cell Atlas

The Chan Zuckerberg Initiative invites applications for one year projects to develop computational tools, algorithms, visualizations, and benchmark datasets in support of the Human Cell Atlas. Participants in this project will collaborate with each other and with Chan Zuckerberg Initiative scientists and engineers to accelerate progress, facilitate communication, and maximize open dissemination of the resulting tools.

OPPORTUNITY

Overview
The goal of the International Human Cell Atlas project is to create a shared, open reference atlas of all cells in the healthy human body as a resource for studies of health and disease. This endeavor will generate molecular and imaging data across a range of modalities and spatial scales, requiring new probabilistic and integrative approaches for analysis and interpretation, systematic comparison of methods on benchmark datasets, and mechanisms for disseminating these methods to a wide community. The Chan Zuckerberg Initiative seeks applications for the development of computational tools, algorithms, visualizations, and benchmark datasets in support of this endeavor. This program welcomes applicants who are new to the Human Cell Atlas — no prior work in this area is required. In a new approach to open, collaborative development, researchers on projects funded by these grants shall work together and share progress with each other to evaluate the strengths of different approaches. To maximize the impact and visibility of this work, members of the Chan Zuckerberg Initiative science and engineering teams will work with successful grant recipients to help enhance and package their tools, and link them to the Human Cell Atlas Data Coordination Platform (DCP), if appropriate and desired.

Project Specifications
Many computational efforts in support of the Human Cell Atlas are underway in the research community, and new methods are needed. This RFA aims to support further development and systematic comparison of methods across existing and new benchmark datasets derived from single-cell RNA sequencing, bulk RNA sequencing, proteomics, image-based transcriptomics, and other tissue imaging approaches. The RFA will also support new analysis and visualization methods, and new approaches to integrating data across modalities. The goal is to support a diverse set of well-validated tools to analyze, consume, integrate, and explore Human Cell Atlas data.
To help the resulting tools reach the widest possible audience, scientists and engineers from the Chan Zuckerberg Initiative will collaborate with researchers on projects funded by this RFA to help bring tools to the scientific community; for example, by helping to enhance or package software with an emphasis on scale, robustness, speed, interoperability, web-based dissemination, and user experience. There will also be opportunities for new tools to connect to and leverage the Human Cell Atlas Data Coordination Platform (https://www.humancellatlas.org/data-sharing), which provides infrastructure for data sharing and cloud computing.

This effort is also a pilot project for new models of collaborative computational research. With the assistance of the Chan Zuckerberg Initiative, project participants will be expected to share their proposals within the collaborating framework, attend regular meetings, workshops, and hackathons, and communicate their ongoing progress through GitHub and Slack. We welcome submissions that represent pre-existing collaborative efforts, but as part of the broader collaborative goals of this RFA, we require each principal investigator to submit a separate application, rather than serving as a co-principal investigator on a shared application.

The goals of this RFA include, but are not limited to:

- Developing standard formats and analysis pipelines for genomic, proteomic, and imaging data, in forms that enable consistent use of these pipelines by numerous experimental labs
- Identifying and solving common challenges for web-based interactive visualization of cellular and imaging data
- Developing user tools that allow scientists and physicians to extract and analyze data organized by genes, cells, or tissues of interest
- Supporting analytical methods and machine learning approaches to solving problems such as multimodal integration, inference of state transitions and developmental trajectories, and representation of spatial relationships at the cellular or molecular level
- Generating curated benchmark datasets from new or existing data for evaluating computational methods and designing future analysis competitions
- Developing new computational approaches to comparing and normalizing genomic and imaging data across assays, subjects, and species
- Generating experimental datasets that directly address computationally-guided questions in quality control, reproducibility, or multimodal integration

Although the focus of the project is analysis of human data, we are interested in new ideas and will consider proposals that focus on data from human tissues, non-human animals, organoids, and cell lines. We encourage proposals from areas of machine learning entirely outside of computational biology, e.g. deep learning. Proposals will be evaluated based on the computational novelty and viability of the method, a commitment to collaboration, the intention to interoperate with existing efforts such as the Human Cell Atlas Data Coordination Platform, and a plan to ensure that software is sharable, portable, and reproducible.

**Project Requirements**

To accelerate scientific discovery and collaboration and help build an open ecosystem around the Human Cell Atlas, the Chan Zuckerberg Initiative supports a consent, sharing, and publication policy for open and rapid dissemination of research results, and a policy for software development that maximizes accessibility, reuse, and shared development.

If awarded, complete forms of accepted proposals will be shared, first among grantees, and then publicly (e.g. as public Google documents, in a GitHub repository, or similar), to help identify opportunities for collaboration and build community among grantees.
Any code developed must be made publicly available on GitHub as it is developed — as soon as a functional prototype exists in minimal form — to encourage outside contribution and collaboration. All code must be released under a permissive open-source license (MIT, Simplified BSD, ISC, or Apache v2.0). All analysis packages must be released through the appropriate language-specific package manager (e.g. PyPi for Python, CRAN for R) with documentation, example data, and interactive demos (e.g. Jupyter notebooks), and the use of Docker or similar container technologies to ensure portability and reproducibility.

Any datasets either curated or generated for this project, such as new benchmark datasets, must be made publicly available and easily accessible online. This requirement includes metadata, documentation, and intended computational use cases. Wherever appropriate, datasets must be deposited into the Human Cell Atlas Data Coordination Platform.

To encourage rapid dissemination, any publications related to this work must be submitted to a preprint server such as bioRxiv before the first submission to a journal.

For any experimental work, all human tissue must be fully consented upon collection to enable open sharing of the resulting data in accordance with laws and regulatory requirements. Appropriate documentation of consents will be required prior to an award for this project RFA, but is not required for the initial stage of the application process.

Indirect costs are limited to 15% of direct costs. Indirect costs may not be assessed on capital equipment or subcontracts, but subcontractors may include up to 15% indirect costs of their direct costs. Applications selected through this process will be recommended for funding through the Chan Zuckerberg Donor-Advised Fund (DAF) at the Silicon Valley Community Foundation.

ELIGIBILITY
Applications may be submitted by scientists, researchers, staff scientists, or software engineers in independent investigator positions, i.e. with principal investigator status, of qualified sponsoring institutions. Graduate students and postdoctoral fellows are not eligible. We expect most successful applicants to come from academic and non-profit institutions and organizations, but will consider other applicants as well. Projects including any activities in Office of Foreign Asset Control (OFAC) sanctioned countries (https://www.treasury.gov/resource-center/sanctions/Programs/Pages/Programs.aspx) are not eligible to apply. Facebook employees, including employees of any subsidiary Facebook entities, are not permitted to apply for this grant. We encourage applications from women, underrepresented minorities, and early career scientists.

APPLICATION PROCESS

Key Dates
7/25/17: Application portal is open for registrations and applications
8/28/17: Applications due by 5:00 PM PT
1/15/18: Earliest notification of decisions (subject to change)
2/1/18: Earliest start date of project (subject to change)

Award period and start date: Proposed projects should be one year in duration with a projected start date no earlier than February 1, 2018. Actual start date may vary.
Registration
Prospective applicants must first register through the Chan Zuckerberg Initiative’s online grants management portal (Fluxx) at https://chanzuckerberg.fluxx.io/. If your registration is approved, you will receive login credentials to the portal within two business days. This notification will be sent to you as an automated email from the Fluxx system. Please consider that these emails may end up in your spam filter. All applications must be submitted through Fluxx, so timely registration is a must. For more information, please see the detailed application instructions (https://chanzuckerberg.com/initiatives/rfa/instructions/).

Application Requirements
All applications must be completed and submitted through the Chan Zuckerberg Initiative’s online grants management portal at (https://chanzuckerberg.fluxx.io/). It is recommended that you familiarize yourself with this portal well in advance of any deadlines.

The application must include the following components:

- Proposed title
- Primary focus area of proposed project (drop-down list)
- Project summary (approximately 250 words; 1,750 characters maximum including punctuation and spaces)
- Keywords
- Full citations (with PubMed links), GitHub repository links, data repositories, and/or similar for up to five of your most significant contributions relevant to the proposal
- Collaborative network (approximately 500 words; 3,500 characters maximum including punctuation and spaces): description of any collaborating groups who are, or are not, applying to this RFA highlighting their expected contributions and how you will work together. We welcome submissions that represent pre-existing collaborative efforts, but as part of the broader collaborative goals of this RFA, we require each principal investigator to submit a separate application, rather than serving as a co-principal investigator on a shared application.
- List of key personnel including name, organization, role on project
- Proposal (1,600 words maximum for text and one page maximum for figures), organized as follows:
  1. Summary
  2. Project aims, and how they address program goals
  3. Prior contributions in this area and preliminary results (not required)
  4. Proposed work and deliverables
  5. Proposal for evaluation and dissemination of methods, resources, or results: e.g., how will benchmark datasets be shared; what testing of computational methods has already been conducted and what new tests are proposed; what engineering support from CZI would advance dissemination of this resource or method
  6. Statement of commitment to share proposals, methods, data, and code with other researchers funded by this RFA and with CZI
- References cited (no page limit)
- Biosketch or CV for applicant (five pages maximum; NIH format or similar) and description of other key personnel in your group (one page maximum). If you are applying from a non-academic institution, please briefly describe your current position in this section.
- Brief preliminary budget (one page maximum): Application budgets must reflect the actual needs of the proposed project within your group; you do not need to estimate the costs of
support from CZI engineering or the HCA Data Coordination Platform. The Chan Zuckerberg Initiative will work closely with successful applicants to arrive at a suitable budget after review.

The proposal, references cited, biosketch, and brief preliminary budget must be uploaded in PDF format. All text in these documents must be in Arial 11 point font and no less than single spaced.

The formatting and component requirements, including word and page limits indicated above, will be enforced by the review team. Any submitted materials that exceed the word and page limits or do not follow the requirements will not be considered during the application review process.

Please note that this application is considered a pre-proposal. For successful applications, we will request additional materials, co-signed by your institutional officials, to determine final budget and administrative details of the award. The Chan Zuckerberg Initiative does not require institutional sign-off at this stage of the application process, but we strongly suggest that you consult your home institution to determine your eligibility to apply for this grant and your institutional policy on indirect costs.

Detailed application instructions are available on the Chan Zuckerberg Initiative website (https://chanzuckerberg.com/initiatives/rfa/instructions/), as well as in the grants management portal following registration.

**REVIEW**

The Chan Zuckerberg Initiative will evaluate all applications for scientific and technical merit and will seek independent expert review of applications. Proposals will be evaluated based on the computational novelty and viability of the method, a commitment to collaboration, the intention to interoperate with existing efforts such as the Human Cell Atlas Data Coordination Platform, and a plan to ensure that software is sharable, portable, and reproducible.

There is no expectation of any specific number of awards, and the Chan Zuckerberg Initiative reserves the right to not recommend the funding of any applications.

**CONFIDENTIALITY**

All submitted applications will be kept confidential to the greatest extent possible, except as necessary for processing and evaluation. After the grant award, all funded proposals will be shared among the collaborating groups, but unfunded proposals will remain confidential. Application materials will not be returned to applicants.

**REPORTING**

For awarded projects, financial statements and progress reports will be due at the conclusion of the grant year. Specific deliverable requirements will be outlined in the award notification. Investigators of funded projects will be required to attend two one-day in-person convenings in the Bay Area during the one-year period of the grant and funds to support this travel should be requested in the budget. Requests for no-cost extensions will be considered.

**RFA CONTACT**

For administrative and programmatic inquiries, technical assistance, or other questions pertaining to this RFA, please contact sciencegrants@chanzuckerberg.com.
APPLICATION INSTRUCTIONS

Collaborative Computational Tools for the Human Cell Atlas

Some helpful information as you get started:

- Please review the Request for Applications (https://chanzuckerberg.com/initiatives/rfa).
- The Chan Zuckerberg Initiative uses Fluxx as its grants management portal. All applications must be submitted through this portal (https://chanzuckerberg.fluxx.io/). Fluxx is configured to work best using the Google Chrome browser. It is recommended that you familiarize yourself with this portal well in advance of any deadlines.
- Before submitting an application, you must first register through the Fluxx grants portal at https://chanzuckerberg.fluxx.io/. It can take up to two business days to receive your login credentials via email after submitting your registration so please plan ahead. Note that this notification will be sent as an automated email from the Fluxx system. Please consider that these emails may end up in your spam filter.
- Completed applications must be submitted electronically through Fluxx and received no later than 5:00 PM PT on August 28, 2017.
- Application specifics:
  - Start date: Requested start date should be no earlier than February 1, 2018. Actual start date for awarded applications may vary.
  - Award Period: Proposed projects should be no longer than one year in duration.
  - Budget: An estimated budget is requested. The Chan Zuckerberg Initiative will work closely with successful applicants to arrive at a suitable budget after review. For Human Cell Atlas (HCA) projects funded by the Chan Zuckerberg Initiative, indirect costs are limited to 15% of direct costs. Indirect costs may not be assessed on capital equipment or subcontracts, but subcontractors may include up to 15% indirect costs of their direct costs.

Please note that this application is considered a pre-proposal. For successful applications, we will request additional materials, co-signed by your institutional officials, to determine final budget and administrative details of the award. The Chan Zuckerberg Initiative does not require Institutional sign-off at this stage of the application process, but we strongly suggest that you consult your home institution to determine your eligibility to apply for this grant and your institutional policy on indirect costs.
GETTING STARTED

Eligibility:
Applications may be submitted by scientists, researchers, staff scientists, or software engineers in independent investigator positions, i.e. with principal investigator status of qualified sponsoring institutions. Graduate students and postdoctoral fellows are not eligible. We expect most successful applicants to come from academic and non-profit institutions and organizations, but will consider other applicants as well. Projects including any activities in Office of Foreign Asset Control (OFAC) sanctioned countries (https://www.treasury.gov/resource-center/sanctions/Programs/Pages/Programs.aspx) are not eligible to apply. Facebook employees, including employees of any subsidiary Facebook entities, are not permitted to apply for this grant. We encourage applications from women, underrepresented minorities, and early career scientists.

Key Dates:
7/25/17: Application portal is open for registrations and applications
8/28/17: Applications due by 5:00 PM PT
1/15/18: Earliest notification of decisions (subject to change)
2/1/18: Earliest start date of project (subject to change)

Registration: Prospective applicants must first register through the Chan Zuckerberg Initiative’s online grants management portal at https://chanzuckerberg.fluxx.io/. Once your registration is received, you will receive login credentials to the portal within two business days. This notification will be sent to you as an automated email from the Fluxx system, so please consider that these emails may end up in your spam filter. All applications must be submitted through Fluxx, so timely registration is a must.

To register:
1. Go to https://chanzuckerberg.fluxx.io/
2. Click the “Register Now” button.
3. Complete all required fields. Required fields are indicated by bolded text. Please note: demographic information will not be used as a basis for review.
   a. Applicant Information:
      i. Applicant name, degrees (enter up to two; enter highest first), year of degrees (optional), title/position, department, phone, email, gender (optional), race (optional).
      ii. Research Area (drop down menu) of the applicant.
      iii. Short narrative biography of the applicant limited to approximately 100 words (maximum of 700 characters including punctuation and spaces).
   b. Organization Information:
      i. Organization name, address, phone, URL.
      ii. Type of organization (drop down menu: academic/non-profit, industry, government, other).
      iii. Primary organizational contact name, title and email: enter the information for the administrative contact (not the applicant) to be notified if additional
information is needed and/or if an award is granted.

iv. Institutional signing official name and title: enter the information for the person who is authorized to sign on behalf of your organization.

v. Tax ID: enter your organization’s Employer Identification Number (EIN) or Taxpayer Identification Number (TIN), as assigned by the Internal Revenue Service. Foreign organizations who do not have either of the above may enter n/a.

c. Communication Preference: please check the box if you agree to receive updates from Chan Zuckerberg Science containing news, notifications, and other information. You can withdraw your consent at any time by logging into your Fluxx account and unchecking the box or by emailing sciencegrants@chanzuckerberg.com.

4. Once all required fields are completed, click the “Submit Request” button.

Within two business days, you will receive an email with your login credentials. If you do not receive it within two business days, please email sciencegrants@chanzuckerberg.com. If you have previously registered in the Chan Zuckerberg Initiative Fluxx portal and already have login credentials, there is no need to register again, but please review your previously entered data in the portal for accuracy.

Navigating the portal: Once you have registered and have received your login credentials, you can log in to the grants portal at https://chanzuckerberg.fluxx.io/. Using the navigation panel on the left of the page, you can access your draft and submitted applications. The organization and user sections are pre-populated with information that you entered during registration. You can view your organization’s information in the “Organization” section; please email sciencegrants@chanzuckerberg.com if you require edits to this section. You can view your personal profile in the “User” section and edit it by clicking the “Edit” button in the upper right corner of the window. In the “Instructions and Forms” section, you will find links to the RFA and Application Instructions document.

Forgotten username or password: If you have forgotten your username or password, please navigate to the grants portal at https://chanzuckerberg.fluxx.io/ and click on the “Reset or create password” link located below the “Sign in” button. When prompted, enter your email address associated with your Fluxx account and you will receive an email with information to reset your username and/or password. Please note that your account will be locked for thirty minutes after three failed login attempts, so please be careful when entering your login credentials.

SUBMITTING AN APPLICATION:

To submit an application:

1. Go to https://chanzuckerberg.fluxx.io/
2. Log in.
3. Click the blue “Apply Now” button on the lower left corner and complete all sections (details below).
   a. You can save your application and come back to it later by clicking the “Save” button in the lower right corner of the window. If you would like to continue working after saving,
click the “Edit” button in the upper right corner of the window. **There is no auto-save so be sure to save often.**

b. If you have already started an application and previously saved it, click on the “Draft Requests” link in the left navigation panel and select the application you would like to edit. The application will open and you will need to click “Edit” in the upper right corner of the window to edit your application.

4. Once all sections are completed and all required documents are uploaded as PDFs, click the “Submit” button in the lower right corner of the window. A “Note” box will appear -- click OK. If any required fields or PDFs are missing, you will receive an “unable to promote” error message. Please complete the missing items, save and submit again. **Once your application has been submitted, it cannot be edited. Please be sure that your application is complete BEFORE submitting.** If you inadvertently submit your application and it is before the deadline, please contact sciencegrants@chanzuckerberg.com.

5. Once your application is submitted, you will receive an email confirming submission within four hours if it is a business day and on the next business day if it is a weekend. If you do not receive a confirmation email within four hours, please email sciencegrants@chanzuckerberg.com.

The application is made up of the following sections: Project Details, Attachments, and Confirmation of Contact Information.

**Project Details:** Please complete all fields in this section.

- **Proposed Title:** enter the title of the project; no character limit.
- **Project Start Date:** enter a proposed start date of no earlier than February 1, 2018; please note that actual start date of successful applications will be determined with Chan Zuckerberg Initiative staff.
- **Project Duration:** enter the number of months of the project; project duration should be no longer than twelve months.
- **Project End Date:** this field will auto-populate based on the entered proposed start date and project duration; this field will auto-populate the next time the application is saved (the “Save” button is in the lower right corner of the window).
- **Amount Requested:** enter total budget amount requested; should match total described in the proposal budget. Total budget amount should include indirect costs (up to 15%).
- **Focus Area of Proposed Project** (drop-down list): choose the area of project focus.
- **Brief Project Summary:** enter a summary of the project; limited to approximately 250 words (1,750 character maximum including punctuation and spaces).
- **Keywords:** enter up to ten keywords that describe the proposal.
- **Significant Contributions:** enter the full citations (with PubMed links), GitHub repository links, data repositories, and/or similar for up to five of your most significant contributions relevant to the proposal.
- **Collaborative Network:** describe any collaborating groups who are, or are not, applying to this RFA, highlighting their expected contributions and how you will work together. We welcome submissions that represent pre-existing collaborative efforts, but because of the special structure of this RFA, we require each principal investigator to submit a separate application, rather than serving as a co-principal investigator on a shared application; limited to approximately 500 words (3,500 characters maximum including punctuation and spaces).
- **Key Personnel**: enter the number of key personnel involved in the project (up to 10), including the applicant; enter the name, organization, and role on project for each of the key personnel; please include the applicant.

**Attachments**: In this section, please upload the following documents in PDF format. To upload an attachment, click on the blue + sign and click “Add files”. Choose the file you would like to upload and click “Start upload”. Close the “Upload files” window by clicking the “X” in the upper right corner of the window when the upload is complete (e.g. 100%). If you add a document and delete it, you will need to save your application before attempting to upload a new document of the same type. **All text in all documents listed below should be 11 point Arial font and no less than single spaced. All documents listed below are required for submission and must be uploaded as separate documents in PDF format. Each PDF can be no larger than 200 MB in size.**

A. **Proposal** (1,600 words maximum for text and one page maximum for figures; figure legends are included in the one page limit for figures, but legend text need not be included in the word limit). Proposal should be organized as follows:
   1. Summary.
   2. Project aims and how they address program goals.
   3. Prior contributions in this area and preliminary results (not required).
   4. Proposed work and deliverables.
   5. Proposal for evaluation and dissemination of methods, resources, or results: e.g., how will benchmark datasets be shared; what testing of computational methods has already been conducted and what new tests are proposed; what engineering support from CZI would advance dissemination of this resource or method.
   6. Statement of commitment to share proposals, methods, data, and code with other researchers funded by this RFA and with CZI.

B. **References Cited** (no page limit).

C. **Biosketch** or CV for applicant (five pages maximum; NIH format or similar) and description of other key personnel in your group (one page maximum). If you are applying from a non-academic institution, please briefly describe your current position in this section.

D. **Brief Preliminary Budget** (one page maximum): Description can be at a high-level and in narrative or tabular form, outlining costs for personnel, supplies, equipment, travel, subcontracts, other costs, and up to 15% indirect costs (excluding equipment and subcontracts). Budget should be requested in US dollars. Investigators will be required to attend two one-day in-person convenings in the Bay Area during the one-year period of the grant. Funds to support this travel should be requested in the budget. Application budgets must reflect the actual needs of the proposed project within your group; you do not need to estimate the costs of support from CZI engineering or the HCA Data Coordination Platform. The Chan Zuckerberg Initiative will work closely with successful applicants to arrive at a suitable budget after review.

**Please note**: PDF file format is required for all attachments.
Confirmation of Contact Information: As part of the application submission process, we require you to confirm your contact information by reviewing your user record and making any updates, if needed.

To navigate to your user record and review/update your contact information:
1. Click “Save” button in bottom right corner to save and navigate away from the application form.
2. Click the User link in the Users section in the left hand panel.
3. Click the “Edit” button in the upper right corner.
4. Make updates to your User record.
5. Click the “Save” button in the lower right corner.

Once you have reviewed and updated your user record, navigate back to your draft application by clicking on the “Draft Requests” link in the left hand panel and selecting the application you would like to return to and edit. The application will open and you will need to click “Edit” in the upper right corner of the window to edit your application. Once the application is open and in edit mode, check the box to certify that you have reviewed your contact information and made any necessary updates.

The formatting and component requirements, including word and page limits indicated above, will be enforced by the review team. Any submitted materials that exceed the word and page limits or do not follow the requirements will not be considered during the application review process.

QUESTIONS?
For administrative and programmatic inquiries, technical assistance, or other questions pertaining to this RFA, please contact sciencegrants@chanzuckerberg.com.
